AcuDose-Rx®

The automated dispensing cabinet that helps nurses get the meds they need, when they need them

- Supports increased accuracy and medication safety
- Reduces costly medication stock outs and diversion
- Optimizes medication inventory
- Allows pharmacy labor to be redeployed to clinical activities
- Features all-new design based on input from nursing/pharmacy staff

aesynt™ | AUTOMATING HEALTHCARE

PHARMA TECH
MEDICAL EQUIPMENT TRADING LLC

Aesynt continuously advances medication delivery, offering integrated pharmacy automation solutions that help health systems to support improved patient outcomes, build stronger businesses and manage ongoing change. For more information, visit www.aesynt.com/our-solutions.

Flexible, easy-to-use dispensing cabinet

Aesynt's AcuDose-Rx® automated dispensing cabinet offers flexibility, capacity and easy-to-use technology that gets nurses in and out faster while freeing pharmacy to support clinical activities. Inventory is optimized and automatically managed in ways that help minimize errors, improve missing medication rates and reduce costly stock outs. AcuDose-Rx helps hospitals enhance patient care and safety, while improving speed, efficiency and accuracy in medication delivery.

Delivers medication when needed

The exclusive RightStock™ feature set monitors and dynamically adjusts inventory levels, per medication and per cabinet, to optimize inventory. When specified meds dip below PAR, the intelligent restocking feature triggers an automatic reorder, helping to prevent potential stock outs. Inventory levels can be adjusted at the pocket level, providing tighter control and helping to keep the right medications when and where they are needed, while reducing instances of expired medications. Technicians are able to place the right amount of inventory in the right place at the right time so nursing submits fewer refill requests and technicians spend less time filling cabinets.

Enables nurses to save their work

Interruptions can now be overcome with patent-pending technology. A first-ever for unit-based cabinets, AcuDose-Rx allows nurses to save their work at the cabinet when their workflow is interrupted and then takes them back to the precise location where they left off, helping them to get back to patient care.

Provides fast and easy access

The new AcuDose-Rx was designed with input from thousands of nurses and pharmacy staff. Built on an intuitive workflow, the new user interface includes an Instructional Panel offering contextual information to the nurses as they perform tasks, reducing the need for training as well as calls to the pharmacy. AcuDose-Rx cabinets are quickly accessible through FastEntry™ Biometrics, a single-touch, secure logon that requires no secondary ID, password or ID badge scan. The new thermal label printer and integrated medication bag drawer give nurses a safe, industry-compliant workflow that provides a receipt label on each medication bag. And, through cabinet-to-bar-code medication administration, both nursing and pharmacy have an accurate record of when a patient's medications are dispensed from a cabinet to when they are administered.

Offers flexible and safe storage

AcuDose-Rx cabinets feature a wide variety of drawer sizes and storage pockets with three security levels. To support medication safety, only the selected storage pocket can be accessed during dispensing and restocking, helping to reduce picking errors; and bar-code scanning on restock keeps items stocked in their assigned locations. These enhanced safety features help to minimize medication errors at every step of the process.
